

Afton Gauntlett, Frontend Engineer

Chapel Hill, NC - US | (571) 249-1952 | hello@aftongauntlett.com

Portfolio (<https://aftongauntlett.com>) | LinkedIn (<https://linkedin.com/in/afton-gauntlett/>) | GitHub (<https://github.com/aftongauntlett>)

PROFESSIONAL SUMMARY

Frontend engineer with six years of professional experience in design systems, accessible UI, and component architecture. Led an Angular-to-React migration, built a multi-theme Storybook design system, and shipped production tooling at Booz Allen Hamilton — earning three internal awards and a spot representing the team at AWS re:Invent.

TECHNICAL SKILLS

TypeScript • JavaScript • React • Next.js • Astro • Vue • Tailwind CSS • Framer Motion • GSAP • Storybook • TanStack Query • Playwright • Jest • Figma • Design Systems • WCAG • Section 508 • Supabase • PostgreSQL • Vercel • Git • Cursor • Codex

EXPERIENCE

Redhorse Corporation, Mid-Level Everything Engineer

08/2026 - Present

- Joined as an "Everything Engineer" to modernize a mission-critical legacy system managing billions of dollars in U.S. international security cooperation, working frontend-first within an agentic AI SDLC alongside tools like Cursor and Codex.
- Own the UX for complex, policy-laden workflows — building and maintaining a React/TypeScript component library with Section 508/WCAG accessibility and plain-language labeling built in by default.
- Build vertical slices of capability spanning React frontends, Node services, and Prisma schemas, holding a high bar for production software through TDD, automated CI, and Playwright end-to-end testing.
- Ship small, reviewable changes in an always-green main branch, replacing a decades-old fat-client system with a modern, humane web platform.

Pretty Pretty Pretty Good, Founder

06/2020 - Present

- Founded a sliding-scale web studio for nonprofits and small businesses — sole point of contact from scope through deployment, keeping production-quality work accessible to mission-driven organizations with limited budgets.
- Aim for 100 Lighthouse scores across builds, with WCAG compliance and screen-reader/keyboard-nav testing, mobile-first by default.
- Select stack to fit project scope — Astro for static-first sites, React or Next.js with Supabase when the work calls for it — optimizing for speed and easy client handoff.

Booz Allen Hamilton

Lead Engineer

03/2023 - 05/2025

- Promoted to Lead Engineer within a year, owning frontend architecture across a portfolio of security-critical applications.
- Accelerated UI development by building a multi-theme Storybook design system and component library — including a convention registration platform used by 100+ attendees (Booz Allen Platinum Award) — and established the design practice from scratch with Figma training and team workflows.
- Designed and delivered a stepper-driven data portal in close collaboration with stakeholders — interactive prototypes won buy-in over a competing proposal, directly influencing a multi-year contract award and earning a Booz Allen Gold Award.
- Identified and scoped an opportunity for a secure LLM-powered chatbot, coordinated with MLOps to stand up the low-side environment, and owned the frontend interface and UX polish from prototype through production.

Software Engineer

03/2022 - 03/2023

- Led an Angular-to-React migration, establishing the design system and workflows the team still uses; the redesigned application earned recognition from Amazon developers at AWS re:Invent and a Booz Allen Gold Award.
- Owned Section 508 compliance across production applications, authoring shared accessibility standards and patterns that made interfaces usable by default.
- Introduced Prettier, ESLint, Husky, and TanStack Query – modernizing the frontend toolchain and shifting the team from class-based to functional components.
- Supported QA team with smoke test authoring and test documentation; trained testers on Postman for API validation ahead of UI availability.

IronClad, UI Developer

12/2021 - 03/2022

- Delivered wireframes and interaction specs that defined the React component architecture for Defense Intelligence Agency web applications.
- Authored accessibility and UI standards adopted as the shared reference for design and engineering alignment.

Global Dimensions, Frontend Developer

08/2021 - 12/2021

- Built a scroll-driven animated timeline for NGA analyst platforms using Vue, GSAP, and CSS – set as the visual reference standard for the project.
- Translated motion-heavy design specs into accessible, high-fidelity components without sacrificing performance, including hands-on JAWS screen reader testing during accessibility validation.

PROJECTS & VOLUNTEER WORK

no-wb.org

no-wb.org

Job search dashboard built on the Hiring Without Whiteboards dataset. Includes an on-demand GitHub Actions workflow and sync script to pull upstream README data into static JSON. No database or server. Full-text search, filtering, pagination. Astro, TypeScript, Tailwind CSS.

Meowdrate

meowdrate.com/

Hydration app for Android, in closed testing on Google Play, that starts full instead of empty – a flood scene recedes as you log drinks, slowly rescuing a trapped cat, with a sky that shifts with real time of day and a sarcastic narrator along for the ride. No streaks, no locked content, no accounts – everything stored locally with no backend, ads, or tracking. Flutter, Dart, Riverpod, flutter_local_notifications.

NPC Finder

npcfinder.com/

Invite-only full-stack media tracker and playlist app. Supabase Auth, PostgreSQL with row-level security, and role-based sharing keep data isolated per user while still supporting collaborative lists. React 19, TypeScript, Tailwind CSS, TanStack Query, Supabase, PostgreSQL, Vercel.

EDUCATION & CERTIFICATIONS

George Washington University, 2020

Full-Stack Web Development

General Assembly, 2022

User Experience Design
